## GRAPHS

## APPLICATIONS

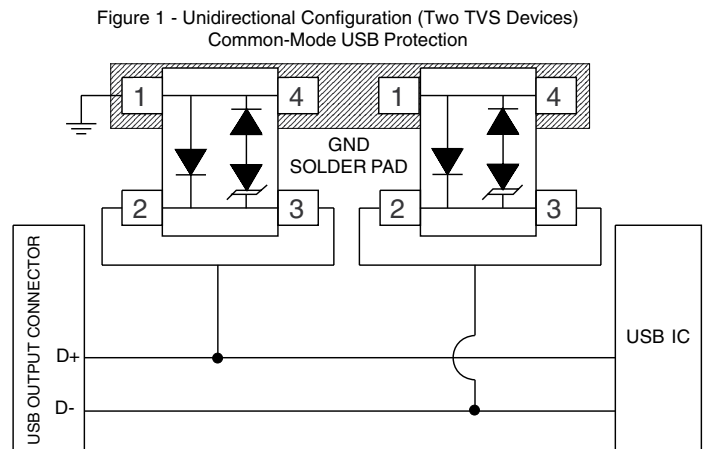

The PSLC Series are TVS arrays designed to protect I/O or data lines from the damaging effects of ESD and EFT. This product series provides both unidirectional and bidirectional protection, with a surge capability of 500 Watts  $P_{pp}$  per line for an 8/20 $\mu$ s waveform and ESD protection > 40kV.

### UNIDIRECTIONAL COMMON-MODE CONFIGURATION (Figure 1)

The two PSLC Series devices provide protection in a common-mode configuration as depicted in Figure 1.

Circuit connectivity is as follows:

- ✓ TVS Device 1: Line 1 (D+) is connected to Pins 2 & 3.
- ✓ TVS Device 2: Line 2 (D-) is connected to Pins 2 & 3.
- ✓ Both TVS Devices: Pins 1 & 4 connected to ground.

### BIDIRECTIONAL DIFFERENTIAL-MODE CONFIGURATION (Figure 2)

The PSLCxxC Series provides protection in a differential-mode configuration as depicted in Figure 2.

Circuit connectivity is as follows:

- ✓ Line 1 ( $R_x$ ) is connected to Pins 1 & 4.
- ✓ Line 2 ( $T_x$ ) is connected to Pins 2 & 3.

### CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Circuit board layout is critical for Electromagnetic Compatibility (EMC) protection. The following guidelines are recommended:

- ✓ The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- ✓ The path length between the TVS device and the protected line should be minimized.
- ✓ All conductive loops including power and ground loops should be minimized.
- ✓ The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- ✓ Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
